**Na+/K+-ATPase α (H-3): sc-48345**

**BACKGROUND**

The ubiquitously expressed sodium/potassium-ATPase (Na+/K+-ATPase) exists as an oligomeric plasma membrane complex that couples the hydrolysis of one molecule of ATP to the importation of three Na+ ions and two K+ ions against their respective electrochemical gradients. As a member of the P-type family of ion motives, Na+/K+-ATPase plays a critical role in maintaining cellular volume, resting membrane potential and Na+-coupled solute transport. Multiple isoforms of three subunits, α, β and γ, comprise the Na+/K+-ATPase oligomer. The α subunit contains the binding sites for ATP and the cations; the glycosylated β subunit ensures correct folding and membrane insertion of the α subunits. The small γ subunit co-localizes with the α subunit in nephron segments, where it increases the affinity of Na+/K+-ATPase for ATP. The β subunit, but not the γ subunit, is essential for normal activity of Na+/K+-ATPase.

**SOURCE**

Na+/K+-ATPase α (H-3) is a mouse monoclonal antibody raised against amino acids 551-850 of Na+/K+-ATPase α1 of human origin.

**PRODUCT**

Each vial contains 200 μg IgG2b, kappa light chain in 1 ml of PBS with ≤0.1% sodium azide and 0.1% gelatin.

Na+/K+-ATPase α (H-3) is available conjugated to agarose (sc-48345 AC), 500 μg/0.25 ml agarose in 1 ml, for IP, to HRP (sc-48345 HRP), 200 μg/ml, for WB, IHQ and ELISA; to either phycoerythrin (sc-48345 PE), fluorescein (sc-48345 FITC), Alexa Fluor® 488 (sc-48345 AF488), Alexa Fluor® 546 (sc-48345 AF546), Alexa Fluor® 594 (sc-48345 AF594) or Alexa Fluor® 647 (sc-48345 AF647), 200 μg/ml, for WB (RGB), IF, IHQ and FCM; and to either Alexa Fluor® 680 (sc-48345 AF680) or Alexa Fluor® 790 (sc-48345 AF790), 200 μg/ml, for Near-Infrared (NIR) WB, IF and FCM.

Alexa Fluor® is a trademark of Molecular Probes, Inc., Oregon, USA.

**APPLICATIONS**

Na+/K+-ATPase α (H-3) is recommended for detection of Na+/K+-ATPase α1, 2 and 3 of mouse, rat and human origin by Western Blotting (starting dilution 1:2000, dilution range 1:2000-1:10000), immunoprecipitation (1-2 μg per 100-500 μg of total protein (1 ml of cell lysate)), immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Na+/K+-ATPase α (H-3) is also recommended for detection of Na+/K+-ATPase α1, 2 and 3 in additional species, including canine.

Molecular Weight of Na+/K+-ATPase α isoforms: 100-113 kDa.

Positive Controls: Hep G2 cell lysate: sc-2227, human kidney extract: sc-363764 or MDCK cell lysate: sc-2252.

**STORAGE**

Store at 4°C. **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.
