p-Tyr (PY20): sc-508

BACKGROUND

The critical involvement of protein tyrosine kinases in signal transduction pathways is well established. These kinases can be divided into two major groups, including the receptor tyrosine kinases and the non-receptor type kinases, of which the Src kinases are the prototypical members. Src kinases are generally associated with the internal portion of the plasma membrane and may function as signal transducers in association with surface receptors that lack an intracellular catalytic domain. The second major group of tyrosine kinases are the receptor tyrosine kinases. Over 50 members of this group of these receptors, belonging to fourteen families, have been identified to date. Ligand-induced tyrosine phosphorylation of such receptors induces receptor dimerization and subsequent autophosphorylation of phosphotyrosine residues located within their cytoplasmic domains, which serve as binding sites that interact with specific cytoplasmic molecules.

Monoclonal antibodies to phosphotyrosine are valuable for the characterization and purification of proteins containing phosphorytrosyl residues, and are used extensively for these purposes.

REFERENCES

SOURCE

p-Tyr (PY20) is a mouse monoclonal antibody raised against p-Tyr.

PRODUCT

Each vial contains 200 µg IgGκ κappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

p-Tyr (PY20) is available conjugated to agarose (sc-508 AC), 500 µg/0.25 ml agarose in 1.0 ml, for IF; to HRP (sc-508 HRP), 200 µg/ml, for WB; for ELISA; to either phycoerythrin (sc-508 PE), fluorescein (sc-508 FITC), Alexa Fluor® 488 (sc-508 AF488), Alexa Fluor® 546 (sc-508 AF546), Alexa Fluor® 594 (sc-508 AF594) or Alexa Fluor® 647 (sc-508 AF647), 200 µg/ml, for WB (RGB); IF, IHC(PE) and FCM; and to either Alexa Fluor® 680 (sc-508 AF680) or Alexa Fluor® 790 (sc-508 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM.

APPLICATIONS

p-Tyr (PY20) is recommended for detection of phosphotyrosine-containing proteins of broad species origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation (1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)), immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:500), immunoperoxidase staining of methanol/acetone fixed rat embryo fibroblasts (sc-508 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-508 HRP), 200 µg/ml, for WB, IHC(PE) and FCM; and to either Alexa Fluor® 488 (sc-508 AF488), Alexa Fluor® 546 (sc-508 AF546), Alexa Fluor® 594 (sc-508 AF594) or Alexa Fluor® 647 (sc-508 AF647), 200 µg/ml, for WB (RGB); IF, IHC(PE) and FCM; and to either Alexa Fluor® 680 (sc-508 AF680) or Alexa Fluor® 790 (sc-508 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM.

Positive Controls: A-431 + EGF whole cell lysate: sc-2202.

STORAGE

Store at 4° C, **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

DATA

Western blot analysis of p-Tyr phosphorylation in untreated (A, C) and EGF treated (B, D) A-431 whole cell lysate. Antibodies tested include p-Tyr (PY195): sc-7020 (A, B) and p-Tyr (PY20): sc-508 (C, D).

p-Tyr (PY20): sc-508. Immunofluorescence staining of methanol/acetone fixed rat embryo fibroblasts both with p-Tyr (PY20) and PC1 (C-15): sc-215 (fluorescein) (A). Immunoperoxidase staining of formalin-fixed, paraffin-embedded normal human urinary bladder tissue showing membrane and cytoplasmic localization of tyrosine phosphorylated proteins (B).
