**NPR-C (E-5): sc-515449**

**BACKGROUND**

The natriuretic peptides are a group of structurally similar peptides that are genetically distinct and play a role in several processes, including cardiovascular, renal and endocrine homeostasis. The atrial natriuretic peptide (ANP) and brain natriuretic peptide (BNP) are derived from myocardial cell origin and are cardiac hormones secreted from the atrium and ventricle of the heart, respectively. The C-type natriuretic peptide (CNP) is derived from endothelial cell origin and acts as an endothelium-derived relaxing factor (EDRF). These peptides mediate their effects through three receptors. NPR-A (also designated GC-A) binds both ANP and BNP, which stimulates 3', 5'-cyclic guanosine monophosphate (cGMP) to mediate natriuresis, vasodilation, renin inhibition, antimitogenesis and lusitropic properties. NPR-B (also designated GC-B) binds CNP and also stimulates cGMP to facilitate vasodilation and growth inhibition. NPR-C, also designated the “clearance” receptor, clears all three peptides, which are subsequently degraded by the ectoenzyme neutral endopeptidase. The natriuretic peptide system plays an important role in hypertension, congestive heart failure, atherosclerosis and renal diseases, and may be a therapeutic target in the treatment of these diseases.

**APPLICATIONS**

NPR-C (E-5) is recommended for detection of NPR-C of mouse, rat and human origin by Western Blotting (starting dilution 1:100, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:1500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:1500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Molecular Weight of NPR-C: 64-66 kDa.

Positive Controls: NPR-C (m): 293T Lysate: sc-122112 or HeLa whole cell lysate: sc-2200.

**DATA**

**CHROMOSOMAL LOCATION**

Genetic locus: NPR3 (human) mapping to 5p13.3; Npr3 (mouse) mapping to 15 A1.

**SOURCE**

NPR-C (E-5) is a mouse monoclonal antibody raised against amino acids 441-440 of NPR-C of human origin.

Each vial contains 200 µg IgG1; kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

NPR-C (E-5) is available conjugated to agarose (sc-515449 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-515449 HRP), 200 µg/ml, for WB, IHC(P) and ELISA; to either phycoerythrin (sc-515449 PE), fluorescein (sc-515449 FITC), Alexa Fluor® 488 (sc-515449 AF488), Alexa Fluor® 546 (sc-515449 AF546), Alexa Fluor® 594 (sc-515449 AF594) or Alexa Fluor® 647 (sc-515449 AF647), 200 µg/ml, for WB (RGB), IF, IHC(P) and FCM; and to either Alexa Fluor® 680 (sc-515449 AF680) or Alexa Fluor® 790 (sc-515449 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM.

Alexa Fluor® is a trademark of Molecular Probes, Inc., Oregon, USA.

**RESEARCH USE**

For research use only, not for use in diagnostic procedures.

**SELECT PRODUCT CITATIONS**

**STORAGE**

Store at 4°C. **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.
