

m-IgGκ BP-CFL 790: sc-516181

BACKGROUND

Mouse IgGκ light chain binding protein (m-IgGκ BP) conjugated to CruzFluor™ 790 is a strongly recommended alternative to conventional anti-mouse IgG secondary antibodies for Western blotting (WB), immunofluorescence (IF) and flow cytometry (FCM) signal enhancement. Mouse IgGκ light chain binding protein is a highly specific detection reagent that provides strong signal with minimal background and virtually complete elimination of lot-to-lot variation associated with conventionally generated secondary antibodies. Mouse IgGκ light chain binding protein (m-IgGκ BP) is suitable for binding to mouse IgGκ light chain immunoglobulins, comprising a vast majority of mouse monoclonal primary antibodies; not suitable for use with mouse monoclonal IgGλ light chain primary antibodies. CruzFluor™ 790 (CFL 680) is an infrared fluorescent dye that is an excellent substitute for AlexaFluor® 790, offering comparable photostability and the ability to resist protein quenching. Suitable for use with Near-Infrared (NIR) imaging systems, such as LI-COR/Odyssey, Invitrogen/iBright and other comparable systems.

SOURCE

m-IgGκ BP-CFL 790 is a purified recombinant mouse IgGκ light chain binding protein conjugated to CruzFluor™ 790 (CFL 790).

PRODUCT

Each vial contains 200 µg mouse IgGκ binding protein-CFL 790 in 0.5 ml of PBS containing 0.1% gelatin and 0.1% sodium azide.

APPLICATIONS

m-IgGκ BP-CFL 790 is recommended for detection of mouse IgGκ light chain by NIR Western Blotting (starting dilution: 1:1000, dilution range: 1:1000-1:10000) and immunofluorescence (starting dilution 1:50, dilution range 1:50-1:200) and flow cytometry (0.5-1 µg per 1 x 10⁶ cells). Optimal dilution to be determined by titration.

For Western Blotting using tissue extracts and m-IgGκ BP-CFL 790, we strongly recommend subtracting endogenous immunoglobulins from extracts with Protein G PLUS-Agarose Reagent: sc-2002, to prevent Western Blotting interference when detecting proteins of approximately 25 kDa in size.
