**mTOR (30): sc-517464**

**BACKGROUND**

The PI3K-related kinases include Atm, DNA-PKcs and mTOR. The Atm gene is mutated in the autosomal recessive disorder ataxia telangiectasia (AT) that is characterized by cerebellar degeneration and the appearance of dilated blood vessels in the conjunctivae of the eyes. AT cells are hypersensitive to ionizing radiation, impaired in mediating the inhibition of DNA synthesis and they display delays in p53 induction. DNA-PK is a heterotrimeric DNA binding enzyme that is composed of a large subunit, DNA-PKcs, and two smaller subunits collectively known as Ku. The loss of DNA-PK leads to defects in DSB repair and V(D)J recombination. mTOR, also known as FRAP, can autophosphorylate on serine and bind to rapamycin/FKBP. mTOR is also an upstream regulator of S6 kinase and has been implicated in the regulation of p27 and p21 expression. mTOR autophosphorylates at Ser 2481 under translationally repressive conditions. Phosphorylation of mTOR at Ser 2448 is mediated by p70S6 kinase.

**CHROMOSOMAL LOCATION**

Genetic locus: mTOR (human) mapping to 1p36.22; Mtor (mouse) mapping to 4 E2.

**SOURCE**

mTOR (30) is a mouse monoclonal antibody raised against amino acids 185-290 of mTOR of rat origin.

**PRODUCT**

Each vial contains 200 µg IgG1 lambda light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin. mTOR (30) is available conjugated to agarose (sc-517464 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; and to HRP (sc-517464 HRP), 200 µg/ml, for WB, IHC(P) and ELISA.

**APPLICATIONS**

mTOR (30) is recommended for detection of mTOR of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation (1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)) and immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500).

Suitable for use as control antibody for mTOR siRNA (h): sc-35409, mTOR siRNA (m): sc-35410, mTOR shRNA Plasmid (h): sc-35409-SH, mTOR shRNA Plasmid (m): sc-35410-SH, mTOR shRNA (h) Lentiviral Particles: sc-35409-V and mTOR shRNA (m) Lentiviral Particles: sc-35410-V.

Molecular Weight (predicted) of mTOR: 289 kDa.

Molecular Weight (observed) of mTOR: 211-245 kDa.

Positive Controls: CCRF-CEM cell lysate: sc-2225, Jurkat whole cell lysate: sc-2204 or HeLa whole cell lysate: sc-2200.

**STORAGE**

Store at 4°C. **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

**RESEARCH USE**

For research use only, not for use in diagnostic procedures.

**DATA**

![mTOR (30) HRP: sc-517464 HRP. Direct western blot analysis of mTOR expression in HeLa (A), HeLa + Calcin A (B), Jurkat (C), Jurkat + Calcin A (D), CCRF-CEM (E) and Tk-1 (F) whole cell lysates.](image)

![Western blot analysis of mTOR phosphorylation in untreated (A, D), Calcin A treated (B, E) and Calcin A and lambda protein phosphatase (sc-200312A) treated (C, F) Jurkat whole cell lysates. Antibodies tested include p-mTOR (Ser 2448) sc-101728 (A, B, C) and mTOR (30): sc-517464 (D, E, F).](image)
