**β Tubulin (D-10): sc-5274**

## BACKGROUND

Tubulin is a major cytoskeleton component that has five distinct forms, designated α, β, γ, δ and ε Tubulin. α and β Tubulins form heterodimers which multimerize to form a microtubule filament. Multiple β Tubulin isoforms (β1, β2, β3, β4, β5, β6 and β8) have been characterized and are expressed in mammalian tissues. β1 and β2 are present throughout the cytosol, β3 is present in the nucleus and nucleoplasm, and β3 is a neuron-specific cytoskeletal protein. γ Tubulin forms thegammaosome, which is required for nucleating microtubule filaments at the centrosomes. Both δ Tubulin and ε Tubulin are associated with the centrosome. δ Tubulin is a homolog of the Chlamydomonas δ Tubulin Uni3 and is found in association with the centrioles, whereas ε Tubulin localizes to the pericentriolar material. ε Tubulin exhibits a cell-cycle-specific pattern of localization; first associating with only the older of the centrosomes in a newly duplicated pair, and later associating with both centrosomes.

## REFERENCES

## SOURCE

β Tubulin (D-10) is a mouse monoclonal antibody raised against a recombinant protein corresponding to amino acids 210-444 of β Tubulin of human origin.

## PRODUCT

Each vial contains 200 µg IgG₂κ kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

β Tubulin (D-10) is available conjugated to agarose (sc-5274 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-5274 HRP), 200 µg/ml, for WB, IHCP and ELISA; to either phycoerythrin (sc-5274 PE), fluorescein (sc-5274 FITC), Alexa Fluor® 488 (sc-5274 AF488), Alexa Fluor® 546 (sc-5274 AF546), Alexa Fluor® 594 (sc-5274 AF594) or Alexa Fluor® 647 (sc-5274 AF647), 200 µg/ml, for WB (RGB), IF, IHCP and FCM; and to either Alexa Fluor® 680 (sc-5274 AF680) or Alexa Fluor® 790 (sc-5274 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM.

Alexa Fluor® is a trademark of Molecular Probes, Inc., Oregon, USA.

## APPLICATIONS

β Tubulin (D-10) is recommended for detection of β Tubulin of mouse, rat and human origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000).

Molecular Weight of β Tubulin: 55 kDa.

Positive Controls: U-2 OS cell lysate: sc-2295, K-562 whole cell lysate: sc-2203 or BJAB whole cell lysate: sc-2207.

## STORAGE

Store at 4°C, “**DO NOT FREEZE**”. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

## DATA

![Image](https://www.scbt.com/image)

**β Tubulin (D-10) Alexa Fluor® 680: sc-5274 AF680. Direct near-infrared western blot analysis of β Tubulin expression in U-2 OS (A), BJAB (B), U-251-MG (C) and K-562 (D) whole cell lysates. Blocked with UltraCruz® Blocking Reagent: sc-516214.**

**β Tubulin (D-10) HRP: sc-5274 HRP.** Direct immunofluorescence staining of formalin-fixed SW480 cells showing membrane localization. Blocked with UltraCruz® Blocking Reagent: sc-516214 (A). β Tubulin (D-10) HRP: sc-5274 HRP. Direct immunoperoxidase staining of formalin-fixed, paraffin-embedded human epidermytic tissue showing cytoplasmic and membrane staining of glandular cells (B).
