BACKGROUND

The cytochrome P450 family is responsible for oxidation of many therapeutic agents as well as steroids, fatty acids and many other endogenous substances. The cytochrome P4502C subfamily comprises a group of constitutive microsomal hemoproteins which are expressed primarily in liver and which catalyze many reactions involved in drug metabolism and synthesis of cholesterol, steroids and other lipids. In humans, this subfamily is responsible for metabolism of a variety of therapeutic drugs such as warfarin, mephenytoin, omeprazole and anti-inflammatory drugs. CYP2C6 is a form of rat liver microsomal cytochrome P450 that is expressed and inducible by phenobarbital in differentiated Reuber hepatoma cells that express many hepatocyte-specific genes but is not expressed in the lung, kidney or brain.

REFERENCE

SOURCE

CYP2C6 (K1) is a mouse monoclonal antibody raised against CYP2C6 purified from rat liver.

PRODUCT

Each vial contains 200 µg IgG, kappa light chain in 1.0 ml of PBS with < 0.1% sodium azide and 0.1% gelatin.

CYP2C6 (K1) is available conjugated to agarose (sc-53245 AC), 500 µg/0.25 ml agarose in 1 ml, for IP; to HRP (sc-53245 HRP), 200 µg/ml, for WB, IHCP and ELISA; to either phycocerythrin (sc-53245 PE), fluorescein (sc-53245 FITC), Alexa Fluor® 488 (sc-53245 AF488), Alexa Fluor® 546 (sc-53245 AF546), Alexa Fluor® 594 (sc-53245 AF594) or Alexa Fluor® 647 (sc-53245 AF647), 200 µg/ml, for WB (RGB), IF, IHQP and FCM; and to either Alexa Fluor® 680 (sc-53245 AF680) or Alexa Fluor® 790 (sc-53245 AF790), 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM., 200 µg/ml, for Near-Infrared (NIR) WB, IF and FCM.

ALEXFluor® is a trademark of Molecular Probes, Inc., Oregon, USA.

STORAGE

Store at 4°C. **DO NOT FREEZE**. Stable for one year from the date of shipment. Non-hazardous. No MSDS required.

APPLICATIONS

CYP2C6 (K1) is recommended for detection of CYP2C9 and other CYP2C proteins of human origin, phenobarbital-induced CYP2C6 proteins of mouse origin, and CYP2C6 of rat origin by Western Blotting (starting dilution 1:200, dilution range 1:100-1:1000), immunoprecipitation [1-2 µg per 100-500 µg of total protein (1 ml of cell lysate)], immunofluorescence (starting dilution 1:50, dilution range 1:50-1:500), immunohistochemistry (including paraffin-embedded sections) (starting dilution 1:50, dilution range 1:50-1:500) and solid phase ELISA (starting dilution 1:30, dilution range 1:30-1:3000); non cross-reactive with CYP2C8.

Molecular Weight of CYP2C6: 49 kDa.

Positive Controls: mouse liver extract: sc-2256 or rat liver extract: sc-2395.

RECOMMENDED SUPPORT REAGENTS

To ensure optimal results, the following support reagents are recommended:
1) Western Blotting: use m-IgG κ BP-HRP: sc-516102 or m-IgG κ BP-HRP (Cruz Marker): sc-516102-CM (dilution range: 1:1000-1:10000), Cruz Marker™ Molecular Weight Standards: sc-2035, UltraCruz® Blocking Reagent: sc-516214 and Western Blotting Luminol Reagent: sc-2048.
2) Immunoprecipitation: use Protein A/G PLUS-Agarose: sc-2003 (0.5 ml agarose/2.0 ml).
