SANTA CRUZ BIOTECHNOLOGY, INC.

ZNF57 siRNA (h): sc-97220

BACKGROUND

Zinc finger proteins contain DNA-binding domains and have a wide variety of functions, most of which encompass some form of transcriptional activation or repression. The majority of zinc finger proteins contain a Krüppel-type DNA binding domain and a KRAB domain, which is thought to interact with KAP1, thereby recruiting histone modifying proteins. ZNF57 (zinc finger protein 57), also known as ZNF424 (zinc finger protein 424) or ZFP57, is a 555 amino acid member of the Krüppel C_2H_2-type zinc finger protein family and is thought to be involved in transcriptional regulation, specifically affecting the expression of peripheral nervous system-related genes. Localized to the nucleus, ZNF57 contains one KRAB domain and 13 C_2H_2-type zinc fingers through which it may convey its DNA, RNA and protein binding capabilities.

CHROMOSOMAL LOCATION

Genetic locus: ZNF57 (human) mapping to 19p13.3.

PRODUCT

ZNF57 siRNA (h) is a pool of 3 target-specific 19-25 nt siRNAs designed to knock down gene expression. Each vial contains 3.3 nmol of lyophilized siRNA, sufficient for a 10 µM solution once resuspended using protocol below. Suitable for 50-100 transfections. Also see ZNF57 shRNA Plasmid (h): sc-97220-SH and ZNF57 shRNA (h) Lentiviral Particles: sc-97220-V as alternate gene silencing products.

For independent verification of ZNF57 (h) gene silencing results, we also provide the individual siRNA duplex components. Each is available as 3.3 nmol of lyophilized siRNA. These include: sc-97220A, sc-97220B and sc-97220C.

STORAGE AND RESUSPENSION

Store lyophilized siRNA duplex at -20° C with desiccant. Stable for at least one year from the date of shipment. Once resuspended, store at -20° C, avoid contact with RNAses and repeated freeze thaw cycles.

Resuspend lyophilized siRNA duplex in 330 µl of the RNAse-free water provided. Resuspension of the siRNA duplex in 330 µl of RNAse-free water makes a 10 µM solution in a 10 µM Tris-HCl, pH 8.0, 20 mM NaCl, 1 mM EDTA buffered solution.

APPLICATIONS

ZNF57 siRNA (h) is recommended for the inhibition of ZNF57 expression in human cells.

SUPPORT REAGENTS

For optimal siRNA transfection efficiency, Santa Cruz Biotechnology's siRNA Transfection Reagent: sc-29528 (0.3 ml), siRNA Transfection Medium: sc-36868 (20 ml) and siRNA Dilution Buffer: sc-29527 (1.5 ml) are recommended. Control siRNAs or Fluorescein Conjugated Control siRNAs are available as 10 µM in 66 µl. Each contain a scrambled sequence that will not lead to the specific degradation of any known cellular mRNA. Fluorescein Conjugated Control siRNAs include: sc-36869, sc-44239, sc-44240 and sc-44241. Control siRNAs include: sc-37007, sc-44230, sc-44231, sc-44232, sc-44233, sc-44234, sc-44235, sc-44236, sc-44237 and sc-44238.

RT-PCR REAGENTS

Semi-quantitative RT-PCR may be performed to monitor ZNF57 gene expression knockdown using RT-PCR Primer: ZNF57 (h)-PR: sc-97220-PR (20 µl). Annealing temperature for the primers should be 55-60° C and the extension temperature should be 68-72° C.

RESEARCH USE

For research use only, not for use in diagnostic procedures.

PROTOCOLS
